The Center for Sustainable Development (CSD) successfully integrates many diverse interests to develop creative, balanced, and achievable solutions to the physical and social challenges that confront the planning, construction, and preservation of buildings, neighborhoods, and regions.

We see the interconnected nature of the ‘sustainability challenge’ as central to our work. We attempt—through our projects, research, interdisciplinary teaching, and ongoing working groups—to better understand the interconnectivity of our environment, economic prosperity, and social justice.

Working within a nationally recognized university, and grappling with issues of sustainability from hundreds of perspectives, the CSD serves as a conduit between these changing times and the people who will live through them. The CSD provides opportunities to stimulate, enhance, and empower our communities for the development of healthy environments, contemporary aesthetics and the economy.
